About Arabelle Solutions

Arabelle Solutions is a market leader in nuclear turbine island technology and services, with a history of innovation going back to the industry's early years.

Why the name Arabelle Solutions

The name Arabelle Solutions reflects our heritage, from steam turbine pioneer Auguste Rateau to Belfort in France, where our modern turbines and generators are designed and made as well as the wide range of engineering services we provide for nuclear power turbines around the world.

Innovative technology

Our technologies range from the world's most powerful steam turbine in operation to modular designs optimized for SMRs, including generators, pumps, heat-exchangers, controls systems and cyber security.

Service portfolio

We repair, monitor and extend the lifecycle of turbine islands across Europe, Asia and Africa, improving power output, reducing the environmental footprint and lowering operational cost.
